GLOBAL AI HACKATHON SERIES WITH QWEN CLOUD · AGENT SOCIETY

EvoMolior

An auditable Qwen Cloud agent society that turns short-lived specialists into durable collective intelligence.

The agent is disposable. **The reviewed substrate is not.**

Qwen Cloud | Competitive societies | Exact evidence | Replayable publication

THE PROBLEM

One context window is a fragile place to keep intelligence.

Reasoning disappears

When a long-lived agent exits, useful intermediate evidence and failed approaches become difficult to recover.

Agreement is invisible

Prompted “debate” often collapses into one model rewriting itself without independent authority or replay.

Completion is too easy

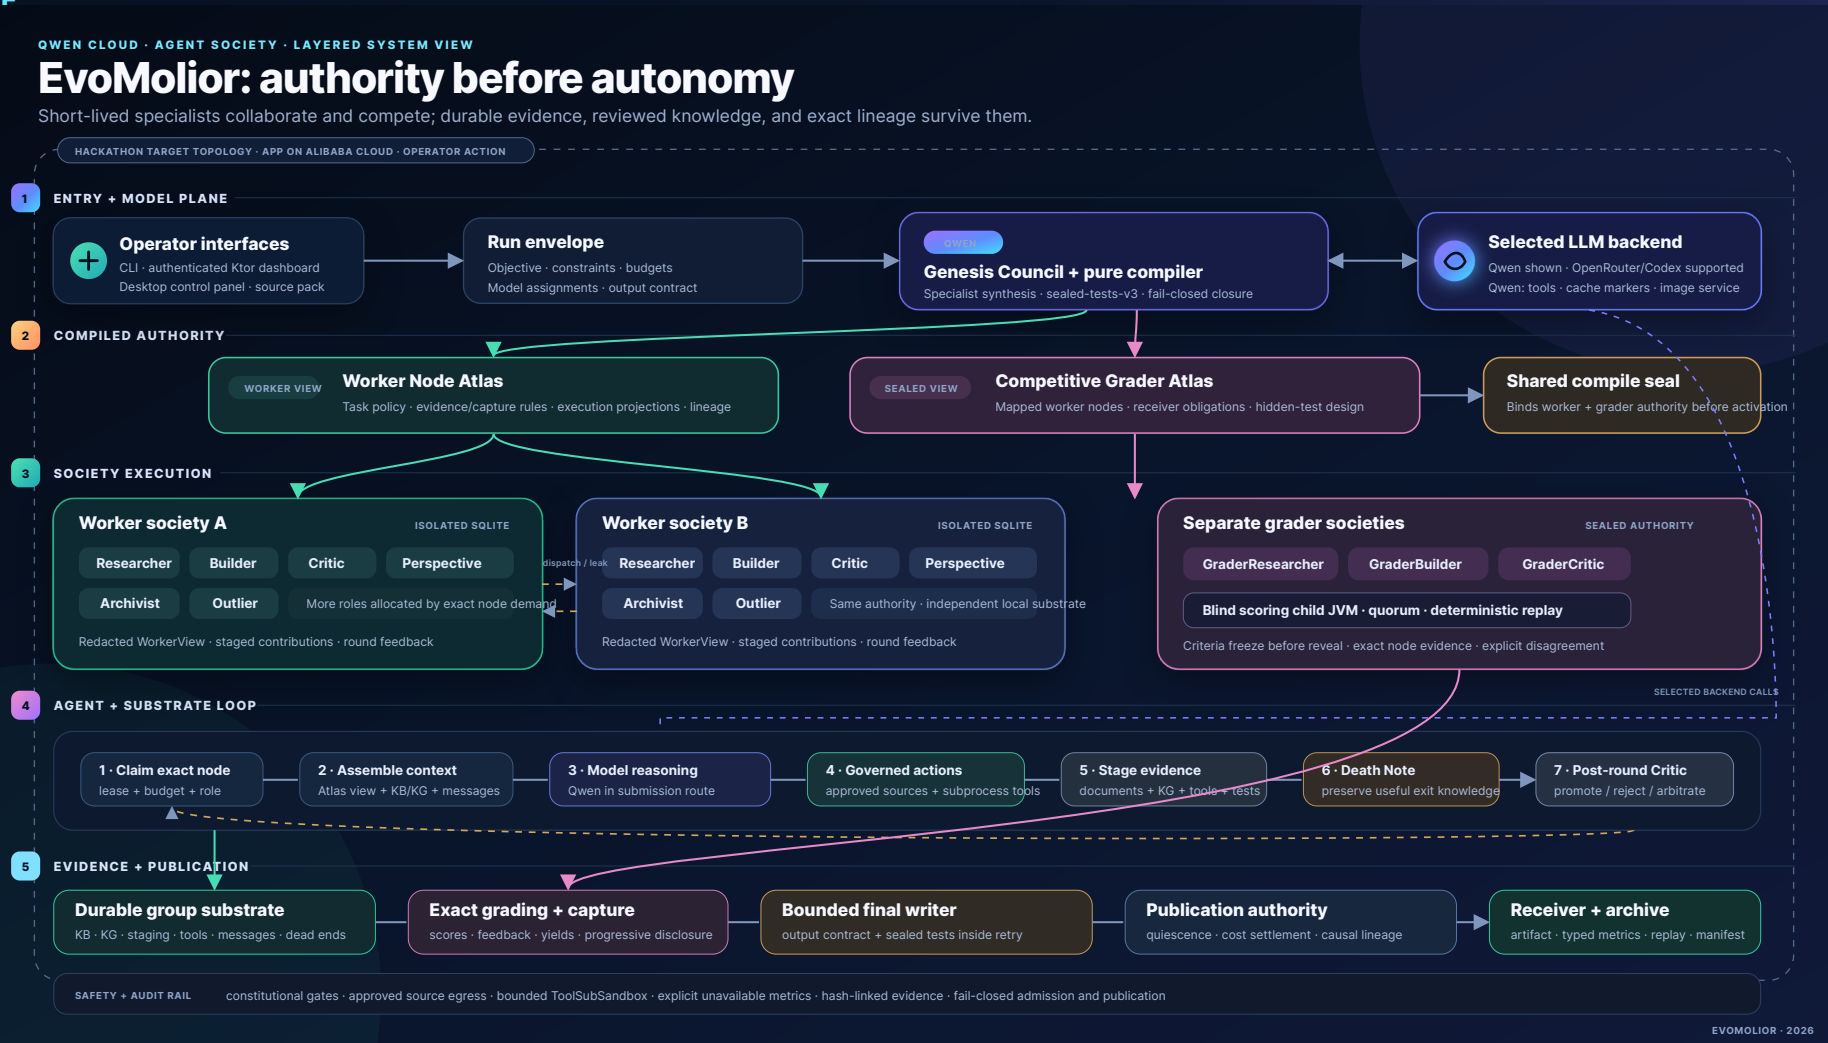

A polished answer can hide missing tests, unsupported claims, unavailable metrics, and unsettled work.

WHO NEEDS THIS

Research, policy, technical strategy, and diligence teams whose output must be inspected, challenged, and reproduced.

OUR DESIGN PRINCIPLE

Persist reviewed knowledge, evidence, tools, tests, dead ends, and lineage. Let individual model invocations remain mortal.

Full-resolution diagram included in the repository

HOW THE SOCIETY WORKS

Authority is explicit at every boundary.

1 · Compile
Genesis Council creates typed roles, sealed tests, stages, and separate Worker/Grader Atlases.

→

2 · Compete
Redacted worker societies claim exact nodes and contribute through isolated substrates.

→

3 · Critique
Documents, KG facts, tools, and simulations are promoted, rejected, or arbitrated.

→

4 · Grade
Separate grader societies freeze criteria, score exact bundles, and resolve disagreement.

→

5 · Publish
Contract tests, quiescence, cost settlement, score replay, and manifest verification gate output.

Mortal specialists

Researchers, Builders, Critics, Archivists, Outliers, Perspective Takers, and oversight roles.

Durable substrate

KB, typed KG, staging, tool registry, evidence, messages, dead ends, and exact lineage.

Independent evaluation

Competitive Grader Atlas, private criteria, isolated scoring, quorum, and deterministic replay.

QWEN CLOUD IMPLEMENTATION

Qwen Cloud is a first-class runtime backend.

Direct model execution

- DashScope / OpenAI-compatible chat completions
- **Qwen3.7-Plus** and **Qwen3.6-Flash**
- Required function/tool calls for tool-enabled turns
- Structured JSON output and schema-aware decoding

Production integration

- Long-context ephemeral cache markers
- Token metadata in observability
- Maintained direct single-Qwen baseline path
- Optional **Qwen Image 2.0 Pro** final assets

Honest model identity: `deepseek-v4-flash` can be routed through Qwen Cloud in selected configurations, but it is not described as a Qwen model.

Kotlin | **JetBrains Koog** | **Ktor** | **Room / SQLite** | **Docker** | **Alibaba Cloud**

EVIDENCE

We report where society helps—and where it does not.

QWEN CLOUD COMPARISON	EVOMOLIOR	SINGLE QWEN AGENT	RESULT
FRAMES 19–21	2/3 exact	1/3 exact	**Narrow society win**
Hard FRAMES 537	1/1 exact	0/1 exact	**One-task win**
MetaSyn task 24 subset	Accuracy .875	Accuracy .875	**Tie; society much slower**
MetaSyn task 419 subset	Accuracy .8571	Accuracy .8571	**Tie**
DeepResearch prompt 62	Required report present	Required report present	**Unscored completeness**

1.0
EVIDENCE-PATH COVERAGE IN BOTH FRAMES ARMS

No hype
NO BROAD SUPERIORITY OR COST-EFFICIENCY CLAIM

Replay
WINS, TIES, FAILURES, LATENCY, AND UNAVAILABLE VALUES RETAINED

BUILT DURING THE CONTEST PERIOD

From agent orchestration to an auditable authority system.

Direct Qwen Cloud runtime

Native model IDs, tool-call compatibility, structured output, cache markers, usage telemetry, and image generation.

Competitive progression

Node grading and capture, delayed yields, progressive disclosure, Outlier shadows, amendments, tools, and simulations.

Post-v72 hardening

Typed sealed-tests-v3, pure test compilation, exact regressions, pre-activation checks, and final-output retry-boundary validation.

Worker and Grader Atlases

Sealed task authority, redacted views, exact leases, private grading criteria, and typed evidence bundles.

Trustworthy publication

Causal lineage, cost reservations, final contracts, score replay, typed metrics, and hash-verifiable archives.

Immutable acceptance

Content-addressed distributions, OS lock, admission control, startup rejection evidence, and source/binary drift checks.

The full multi-round Appendix-B qualification is being finalized. The next matched comparison is deliberately deferred, so it is not used as a submission claim.

EVOMOLIOR

Agents die.
Knowledge compounds.

Qwen Cloud-powered societies that collaborate, compete, disagree, and leave behind inspectable intelligence.
